

Climate change and forests: fact and fantasy

Friday, March 5th, 2010 - 1:30 p.m.
Weaver Auditorium, Nipissing University

The role that humans play in climate change is a complex and confusing topic. Much of the confusion is caused by the often conflicting information provided by various sources.

If you are interested in learning about the role of forests and forestry in climate change, come to Nipissing University and listen to Dr. Michael Ter-Mikaelian at 1:30 pm on Friday March 5th, 2010. There will be a question period following the presentation to allow for discussion.

Dr. Ter-Mikaelian is a research scientist with the Ontario Ministry of Natural Resources and an authority on the role of forests and forestry in carbon sequestration. There is no charge for this presentation that is co-sponsored by the Algonquin Section of the Canadian Institute of Forestry and Nipissing University.
