

Algonquin College Outdoor Education Students Receive Clean Air Tree Kits by Alison Luke

Algonquin College Students in Pembroke received Clean Air Tree Kits recently as part of presentations on climate change given by Algonquin Section councillor, Alison Luke. The kits, made from biodegradable,

vegetable starch material, contain white spruce seeds, along with a *Jiffy*[™] pellet to help germinate the seeds. Also contained in the kits is a PIN that can be entered on the website (<http://www.wcafi.org/en/>) and a donation is made to the CIF's 'Forests without Borders' program. The outdoor education students were very impressed by this small gift and some even thought that they would make excellent stocking stuffers for Christmas. Indeed, they surely would!
