Atlas Engineered Products

Chief Executive Officer

Atlas Engineered Products ("Atlas") is a leading publicly traded suppliers of trusses and engineered wood products. The company was formed over 18 years ago and operates manufacturing and distribution facilities in British Columbia, Alberta and Ontario to meet the needs of residential and commercial builders. Atlas has expert design and engineering teams, a multiple-shift state-of-the-art truss manufacturing operation, and large inventories of engineered beam and flooring components.

Atlas continues to grow its base of business across Canada by pursuing an aggressive acquisition and consolidation strategy and will continue to bring its construction industry partners unparalleled excellence in service, product, and support.

Reporting to the Board of Directors, the Chief Executive Officer will be accountable for providing effective and dynamic leadership and for achieving strategic, operating and revenue objectives of Atlas Engineered Products. The CEO will ensure that the company's business plan fits the demands of the ever-changing residential and commercial construction industry and its constituents. Working closely with colleagues from the company's various departments, the Chief Executive Officer will help develop solutions in the areas of infrastructure management, pricing, profit & loss management, partnerships, staffing and general operational leadership.

As Atlas' next leader, you will have been a senior executive in a multi-site manufacturing business. Experience could include forestry, building products or other industrial sectors. Alternatively, you will be an executive in the construction industry working with clients engaged in wood framed residential and commercial construction. The preferred candidate will have exceptional leadership and mentorship capabilities and be skilled in managing the financial performance of a manufacturing business.

This is a unique opportunity for a strategic senior executive who is excited by the opportunity to lead the business operations of a multi-site, publicly traded engineered wood products company with a bright future. The successful executive for this role will be able to be based in their preferred location in Canada.
