Healthy Forests, Healthy Future

Healthy forests benefit us all. National Forest Week 2020 challenges everyone to learn more about what health threats Canada's forests are facing and what you can do to help the forest around you.

Healthy trees make healthy forests. Healthy forests make healthy people. And healthy people make healthy communities. Insects, disease and wildfire are part of the natural life cycle, however invasive species and a changing environment pose new threats to our forests. Safeguarding the health of Canada's forests is a critical nature-based solution to mitigate climate change, provide clean air, clean water, and valuable habitats. Forest professionals, researchers, and scientists from coast to coast are responding to ensure that our forests continue to be vibrant, resilient, and healthy now and for the future.

Get involved by learning more about the importance of forest health in the life cycle of our forests.

2020 marks the centennial anniversary of this national campaign!
