

Seismic Line Restoration

Technical Session

Natural Resources Canada - Canadian Institute of Forestry

This is a technical session co-organized NRCan and the CIF Rocky Mountain Section. The goal of this session is to facilitate discussion and provide updated information on current land-use planning, policy, research and strategies surrounding development and reclamation of seismic lines in Alberta's boreal forest.

Matthew Pyper will deliver a key note address outlining a regulatory review of seismic line restoration and a preview into the Alberta Environment and Parks' Seismic Line Restoration Guide for Caribou Habitat.

Talks will focus on work currently being done in Alberta by government, non-government organizations and industry. Panel discussion at the end of the session will provide opportunities for more discussion and more detailed questions.

Sponsorship opportunities are available and we are accepting poster submissions. For more information, please contact us prior to registration at symposium-ab@cif-ifc.org.

Thursday December 1, 2016

Shaw Theatre, Northern Alberta Institute of Technology (NAIT)
